

NEURAL NETWORK AND DEEP LEARNING ASSIGNMENT-1

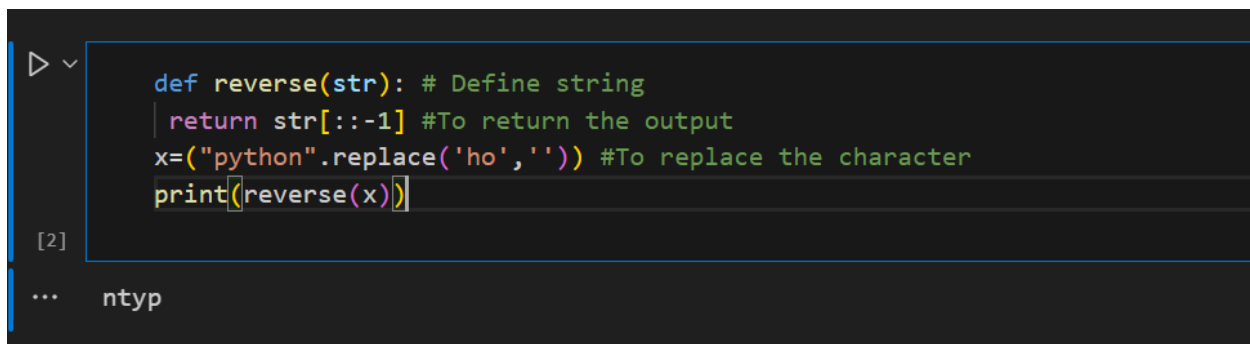

GITHUB LINK:- <https://github.com/Humanikorem/NeuralAssign1.git>

- 1) A) Write a python program for the following: – Input the string “Python” as a list of characters from console, delete at least 2 characters, reverse the resultant string and print it.

```
def reverse(str):          # Define string
    return str[::-1]       #To return the output

x=("python".replace('ho','')) #To replace the character
print(reverse(x))          #To reverse the string
```

Output:-

```
def reverse(str): # Define string
    return str[::-1] #To return the output
x=("python".replace('ho','')) #To replace the character
print(reverse(x))

[2]
```

- 1) B) Take two numbers from user and perform at least 4 arithmetic operations on them.

```
a=2          #number1
b=3          #number2
print("sum = ",a+b)      #Addition of 2 numbers
print("diff = ",a-b)     #Difference between 2 numbers
print("Divide = ", a/b)  #Division
print("Percentage = ", a%b) #Percentage
```

Output

```
▶ ▾  
a=2 #number1  
b=3 #number2  
print("sum = ",a+b) #Addition of 2 numbers  
print("diff = ",a-b) #Difference between 2 numbers  
print("Divide = ", a/b) #Division  
print("Percentage = ", a%b)#Percentage  
[4]  
Python  
... sum = 5  
diff = -1  
Divide = 0.6666666666666666  
Percentage = 2
```

- 2) Write a program that accepts a sentence and replace each occurrence of 'python' with 'pythons'.

Input: I love playing with python

```
str="I love playing with python"  
print(str.replace('python','pythons')) #To replace one string with  
another
```

Output:-

```
▶ ▾  
str="I love playing with python"  
print(str.replace('python','pythons')) #To replace one string with another  
[6]  
... I love playing with pythons
```

- 3) Use the if statement conditions to write a program to print the letter grade based on an input class score. Use the grading scheme we are using in this class.

```
sub1=10
```

```
sub2=30
total=sub1+sub2

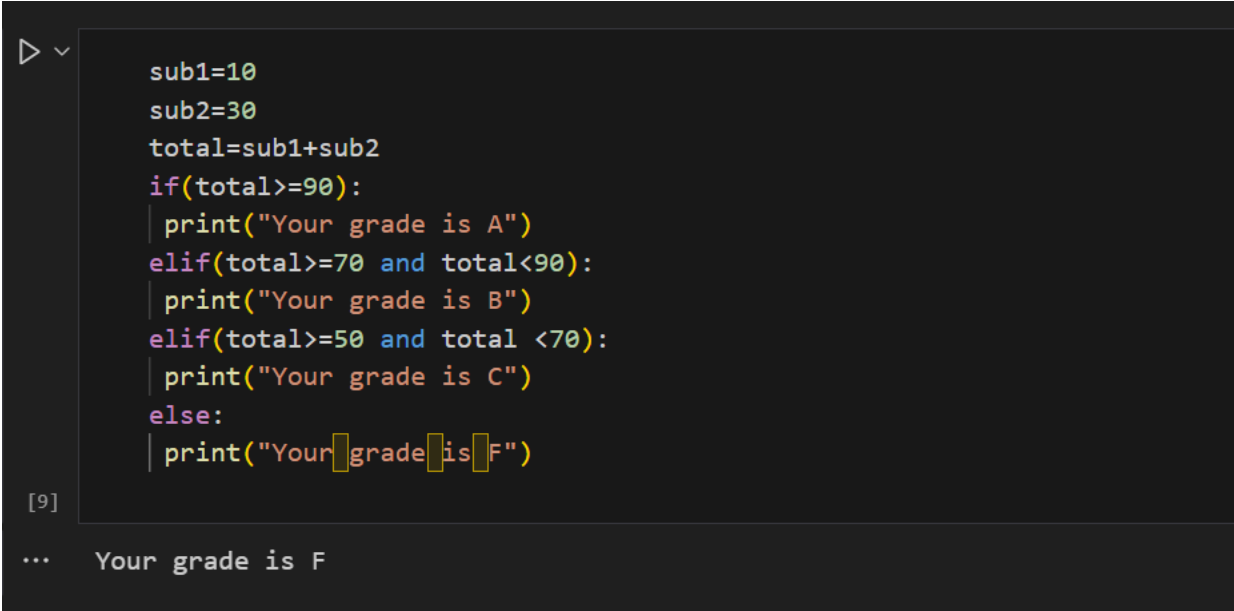

if(total>=90):
    print("Your grade is A")

elif(total>=70 and total<90):
    print("Your grade is B")

elif(total>=50 and total <70):
    print("Your grade is C")

else:
    print("Your grade is F")
```

Output:-

```
sub1=10
sub2=30
total=sub1+sub2
if(total>=90):
    print("Your grade is A")
elif(total>=70 and total<90):
    print("Your grade is B")
elif(total>=50 and total <70):
    print("Your grade is C")
else:
    print("Your grade is F")
```

[9]

... Your grade is F
